FOR IMMEDIATE RELEASE:

August 11, 2006
FB06-035

SEASONAL PROHIBITION OF THE POSSESSION OF BLACK, BLACKFIN, VERMILION, AND SILK SNAPPER IN CARIBBEAN FEDERAL WATERS AT 12:01 A.M., LOCAL TIME, EFFECTIVE OCTOBER 1, 2006

NOAA Fisheries Service reminds the public there is a seasonal prohibition on fishing for or possession of black, blackfin, vermilion, and silk snapper from 12:01 a.m., local time, October 1, 2006, through December 31, 2006. Caribbean federal waters are those waters extending to 200 nautical miles offshore from the nine-mile seaward boundary of the Commonwealth of Puerto Rico and the three-mile seaward boundary of the territory of the U. S. Virgin Islands.

This action complies with regulations implemented under Amendment 3 to the Fishery Management Plan for the Reef Fish Fishery of Puerto Rico and the U. S. Virgin Islands to address required provisions of the Magnuson-Stevens Fishery Conservation and Management Act, and is necessary to protect these resources. The Caribbean Fishery Management Council, in cooperation with NOAA Fisheries Service, developed the amendment.

The amendment also established other seasonal closures for various species. The following species may not be fished for or possessed during the time period identified below:

(1) Red hind off the west coast of Puerto Rico (defined as those waters in the U.S. Caribbean exclusive

economic zone west of 67° 10' W longitude):
December 1 through February 28; and
(2) red, black, tiger, yellowfin, and yellowedge grouper: February 1 through April 30.

The National Oceanic and Atmospheric Administration (NOAA), an agency of the U.S. Commerce Department, is dedicated to enhancing economic security and national safety through the prediction and research of weather and climate-related events and information service delivery for transportation, and by providing environmental stewardship of our nation's coastal and marine resources.

In 2007, NOAA celebrates 200 years of science and service to the nation. From the establishment of the U.S. Coast and Geodetic Survey in 1807 to the formation of the Weather Bureau and the Bureau of Commercial Fisheries in the 1870s, much of America's scientific heritage is rooted in these early agencies that became one under NOAA in 1970.

Through the emerging Global Earth Observation System of Systems, NOAA is working with its federal partners and nearly 60 countries to develop a global monitoring network that is as integrated as the planet it observes.
