

**Rani Henderson**

**Galveston Bay Foundation**

**Project title: Get Hip to Habitat**

**Smart Phone/Device Apps of Interest:**

iNaturalist - You take pics of the flora and fauna of a certain area and overtime the app creates a field id specific to that area. The students can become a part of this. If you have a hard time identify what it is then others within the app system can help you identify. There is also space for documenting where, time, date, notes, of when you saw the specimen

Phyto - It's an app that identifies and pronounces the species name of the plankton. It was created by a volunteer with the Phytoplankton Monitoring Network (which is started from NOAA and anyone can easily join and you students help monitor plankton within their area.)
