

Project Inventory for Acropora Recovery Plan Implementation

Purpose: This Excel file includes an inventory of projects related to implementing the Recovery Plan for *Acropora palmata* and *A. cervicornis*. The inventory was compiled by the Acropora Recovery Implementation Team, an appointed advisory body to the NOAA Fisheries Southeast Regional Office. This inventory will be updated on a regular basis to track recovery plan implementation and to assist prioritizing future recovery efforts and investments.

Description of content: The first worksheet “Recovery Plan Actions” lists the actions from the Recovery Plan and their action number.

The second worksheet “All Projects” lists all known projects that address actions in the Recovery Plan. Information for each project includes:

- the action number in the Recovery Plan the project addresses
- year of initiation
- whether the project is complete or ongoing
- point of contact and affiliation
- title or topic
- a short project description
- major findings or outcomes
- publications or reports

All subsequent worksheets (e.g., Action 1, Action 2) list the same projects and information separately for each action in the Recovery Plan for ease of searching projects by action number.
